# mySHIELD™

Mobile Personal Emergency Response System (mPERS)

Numerex®

Smart Data **Delivered**™

## Wearable IoT Technology – *Powered by Numerex*

mySHIELD™, *powered by Numerex*, is a mobile personal emergency response IoT solution designed to enhance the safety of lone workers, the elderly, and other at risk groups. Featuring a small form-factor, wireless cellular connectivity, lanyard or clip-on capabilities, mySHIELD provides access to a live operator via a one-touch panic button. mySHIELD is the perfect solution to enhance the safety of wearers who often are alone, or are likely to find themselves in potentially hazardous situations where safety could be jeopardized.

With the flexibility to adapt to a number of use cases, mySHIELD not only enables employers to provide a measure of safety and comfort to workers in high risk occupations, but also serves the safety needs of vulnerable groups like the elderly and others.

## Protect At Risk Groups Remotely, Efficiently, and Effectively

A cloud-based solution, mySHIELD utilizes two-way, voice-enabled, cellular technology that works indoors or outdoors. The simple press of a panic button enables users to easily communicate their need for immediate assistance, transmit their precise location indoors and outdoors, and speak to a live attendant in a call center that is staffed 24/7/365.

mySHIELD is scalable for businesses that want to enhance the safety of large numbers of independent employees or other groups of at risk individuals. Utilizing a user friendly, cloud-based, dashboard management portal, the solution supports many advantages for both wearers and resellers.

### WIDE RANGING USE CASES

- Real Estate
- Assisted Living
- Security
- Energy & Utility
- Retail
- Education

## Benefits for Enterprise Users

- Improve response time to critical situations when employees are in distress
- Easily determine the location and status of employees
- Logically combine users into groups and sub-groups based on organizational requirements
- Mitigate insurance risks by providing a means to summon assistance for remote employees

## Benefits for Wearers

- Offers supervised, unrestricted mobility for vulnerable or at risk wearers
- Enables wearers to quickly connect in the event of emergency
- Grants peace of mind for wearers that help can be quickly summoned
- Provides a clip-on, wearable solution that is discreet and portable

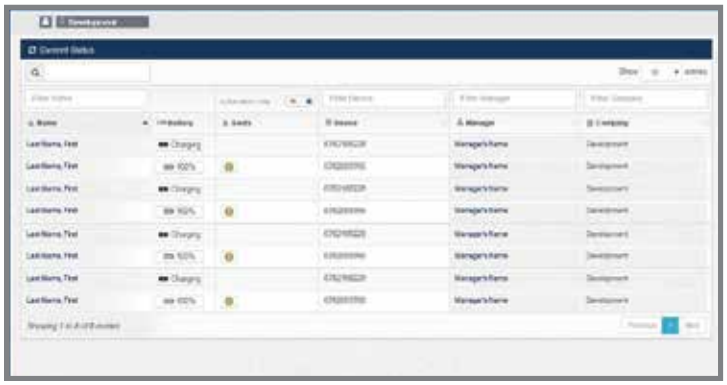
Specifications subject to change without notice.

# Administrative and Management Benefits

Available in multiple languages, the mySHIELD solution provides a dashboard that enables administrators to locate users with mapped views, as well as to schedule automated alerts and notifications sent by email and text messaging.

Unlike many other solutions, mySHIELD operates across a cellular connection, and users are not required to be within close proximity to a base station.

View last known location of wearers on the location map



Provision, troubleshoot, and manage all wearers from a centralized portal

Dashboard offers enterprise users a quick snapshot of key information

## Key Features

- Two-way voice communication
- One-touch panic button
- Tracking with integrated GPS
- Multiple clip-on or carry accessories

## Key Benefits

- Freedom of movement for the wearer
- Identify location of wearers at any time
- Manage large groups from a single dashboard
- Provision, activate, and deactivate devices remotely
- View wearer status and alerts
- Live call center 24/7/365

## Specifications

- AGPS
- Dual Band (800/1900 MHz CDMA)
- 810 mAh Lithium Ion Battery
- Stand by time — up to 4 days
- Waterproof — IPX7 compliant
- Size: (H) 2.4” x (W) 1.7” x (D) 0.7”
- Weight: 1.9 oz

Specifications subject to change without notice.
