

# iManage™

Uncover the blind spots in your supply chain

**Numerex®**

Smart Data Delivered™

# Control the Chaos of the Supply Chain

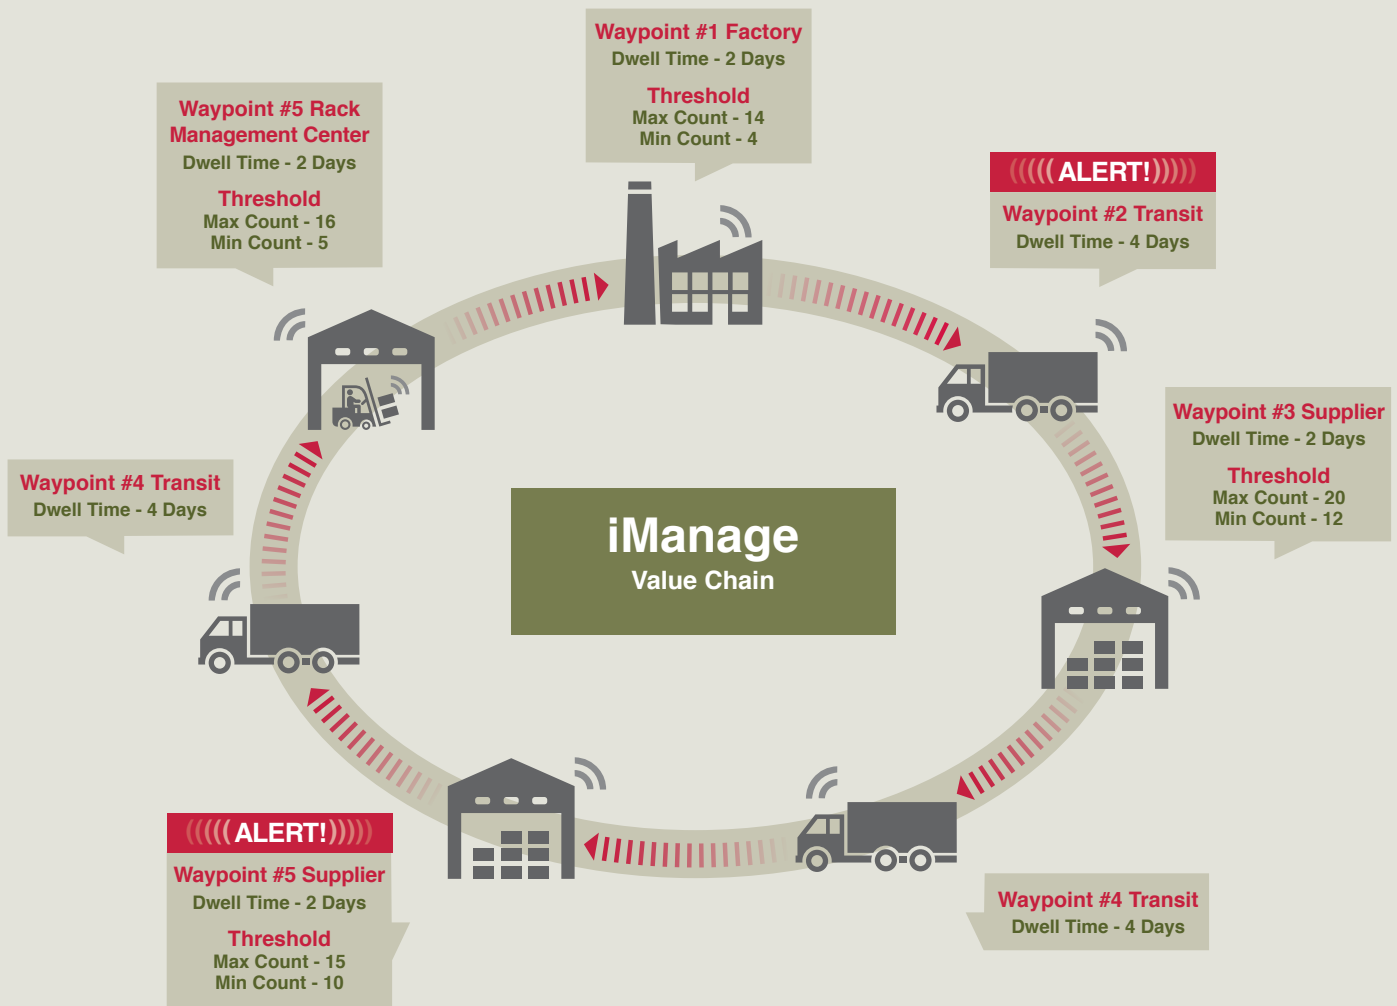

A significant challenge for many manufacturing companies is managing the complexity of the production and distribution processes. With geographic diversity of suppliers and plants, and marketplace demands that require keen attention to deadlines, smart companies count on Numerex to optimize their logistics operations throughout the supply chain.

At Numerex, we uncover the blind spots across the production supply chain by giving managers the tools that they need to stay connected to their materials flow beyond the boundaries of the manufacturing facilities. From knowledge, comes insight. And with insight, smart decisions are made.

## How iManage Works

iManage™, is a manufacturing optimization solution built on Numerex's cloud-based horizontal delivery platform. iManage helps manufacturers optimize production by wirelessly tracking, managing, and analyzing the flow of production parts, assemblies, and racks between factories and suppliers. The solution alerts professionals in the event of a stoppage, slowdown, or problem. iManage enables tracking of parts and assemblies across multiple plants and suppliers. Our solution allows supply chain professionals to take proactive actions to ensure that production facilities continue to operate without interruption, material shortages, or expedited-shipping charges.

▶ Maximize production efficiencies, minimize inventory, and eliminate waste.

# Delivering Value to Manufacturers

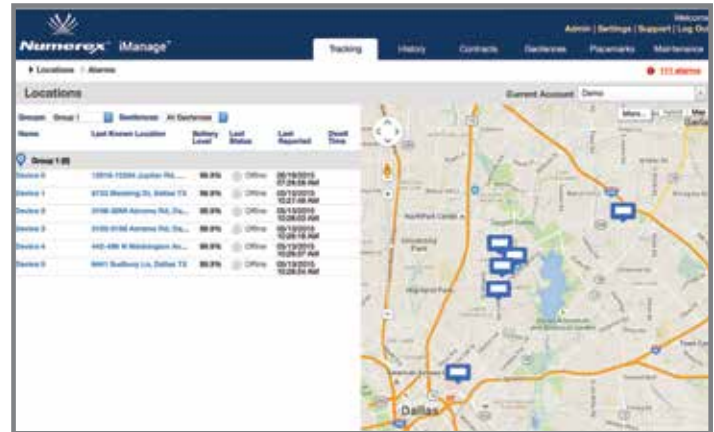

iManage gives accurate, real-time visibility into cross-factory material flows. It uncovers delays before they become problematic and makes bottlenecks visible. Using advanced analytics, the data from tracking devices becomes visible in reports, alerts, and notifications, allowing supply chain professionals to understand what is necessary to keep their production processes flowing smoothly. Increased visibility and actionable data prevent production stoppages, eliminate expedite fees, and enable efficient meeting of deadlines.

## Operational Dashboard

Quick snapshot with key metrics for asset optimization

## Location and Dwell Times

Add and manage geofences, set and track dwell times

## Features

- Location, movement, dwell and cycle time tracking
- Dashboard views with advanced analytics
- Email and text alerts — notifies professionals of problems
- Configurable device reporting schedules
- Integrated mapping visualization

## Benefits

- Improves material flow and inventory management
- Prevents manufacturing floor stoppage
- Significantly reduces expedited shipping charges
- Provides data for tracking compliance with 3PL SLAs
- Mitigates loss or theft of shipping racks or containers

## The NumerexDNA<sup>®</sup> Advantage

Numerex is a single source, full service provider of Industrial IoT solutions for any vertical market. Operating in a cloud-based environment, **NumerexDNA (Device, Network, and Application)** provides the ability to deliver a complete solution with speed and ease. Leveraging the Numerex platform, we are able to offer rapid deployment of a complete solution — purpose-built to have immediate, significant, and lasting impact on business processes and operational efficiencies.

### Device

Device Management Integrated Solutions

### Numerex Network

Solutions — 2G, 3G, 4G, LTE, and Satellite

### Application

iManage Cloud-Based Portal

**Ready to control the chaos?** Uncover the blind spots in your supply chain and improve your bottom line. Discover the power of Industrial IoT technology to track, monitor, optimize, and secure, any asset, virtually anywhere, across the globe.
