

DEVICE

mySHIELD™

Mobile Personal Emergency Response System

mySHIELD is a wearable, personal emergency response system designed to enhance the safety of wearers who often are alone, or are likely to find themselves in potentially hazardous situations where safety could be jeopardized. Featuring a small form-factor, wireless cellular connectivity and lanyard or clip-on capabilities, mySHIELD tracks the location of the wearer and provides access to a live operator via a one-touch panic button.

BENEFITS

- Uses a cellular connection to locate wearers both indoors and outdoors
- Single push button device contacts a call center
- Allows an emergency call to the device even if the wearer is unable to respond
- Utilizes precise location capabilities which support the E911 standard

Features

Two-way voice communication with a live agent

Innovative Smart Call feature uses auto-dial to complete all calls that are initiated

Cloud-based application to manage and locate devices as well as provide alerts and notifications

Live technical support available 24/7/365

Pre-packaged kit includes multiple charging and wearing options

Docking station can be used as a charger and a home beacon

Device location available on demand, every 2 hours, or when the panic button is pressed

Built on carrier grade infrastructure, providing “always on” reliability and uptime
